

Suddenly, the United States fell into a shortage of steel, and China's steel was directly stuck in the neck of foreign countries. It was difficult to find a steel in the world. However, as the world's largest steel producer, as early as may, the average price per ton of steel of the eight steel varieties once exceeded 6600 yuan, up 75% compared with the same period last year.

The United States, Germany and other countries, which are originally "steel shortage", are in a greater dilemma, but what?

In Australia, iron ore once rose to an all-time high, making a lot of money.
Bearing steel prices are rising rapidly, and bearing manufacturers are adjusting the latest prices.
